                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients, particularly those with pernicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly momeprazole or lansoprazole) or H.2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents the human gastrin G34 peptide which is used to illustrate the method of the invention.

Antigenic fragments may be attached to an immunogenic carrier and used to raise Abs to a specific single form of Gastrin ie. G17 or G34. Peptide fragments capable of binding to these Abs are useful in neutralising anti-gastrin Abs in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 75; DB 21; Length 12; Llarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients, particularly those with pernicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly comeprazole or lansoprazole) or H.2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents a human gastrin G34 derived immunogen which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gastroesophageal reflux disease; GERD; gastrin; anti-gastrin antibody; histamine H_2; proton pump inhibitor; acid output; stomach; therapy; esophagitis; immunogen; human; tetratriacontagastrin; G34.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H_2 antagonist or a proton pump inhibitor. The method provides a more effective method for controlling acid output by the stomach. The therapy is less costly. High gastrin levels associated with standard therapies are neutralized and undesirable side effects are reduced. The method permits a reduced closate of acid reducing agent both at the acid producing level as well as the acid production stimulating level (gastrin). Reduction of dosages is desirable for prolonged treatment of GERD. In a combination therapy with H_2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The munogenic peptide.

synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiseous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component.

The present sequence is an example of a gastrin hapten which can be benefit of the immune stimulator to form a vaccine for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                    polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and threapy, and can be useful the pulphalments. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the encoded proteins (AA000010-FAA01910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymetales are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities,
polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antaqonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as untritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                        bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU39510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides (AAI79941-AAI93841) and

                                                                                                                                                                               0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopoissis regulating activity, issue growth factor activity immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                           Human; cytokine; cell proliferation; cell differentiation; gene therapy; vacchie; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immune

                                                                                                                                                                                            This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic cariter. The methods are used to treat hypergastrinemic patients, particularly those with pernicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly omeprazole or lansoprazole) or H_2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents a human gastrin G17 derived immunogen which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gastroesophageal reflux disease; GERD; gastrin; anti-gastrin antibody; histamine H_2; proton pump inhibitor; acid output; stomach; therapy; esophagitis; immunogen; human; heptadecagastrin; G17.

The invention relates to the treatment of gastroesophageal reflux disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H.2 antagonist or a proton pump inhibitor. The method provides a more effective method for controlling acid output by the stomach. The therapy is less costly. High gastrin levels associated with standard therapies are neutralized and undesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the acid production stimulating level (gastrin). Reduction of Gosages is desirable for prolonged treatment of GERD. In a combination therapy with H.2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. Sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to human polynuclectides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynuclectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and extivity. Inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecules encoding 62 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives - \frac{1}{2} \int_{-\infty}^{\infty} \frac

human secreted proteins encoded by the genes AAC69512-C69587. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the humantoid arthritis; (b) hyperproliferative discorders e.g. neoplasms of the breast or liver; (c) cardiovascular disorders e.g. neoplasms arrest; (d) cerebrovascular disorders e.g. cardiac arrest; (d) cerebrovascular disorders e.g. cerebral isolated anglogenesis; (f) nervous system disorders e.g. Alzhemia; (e) anglogenesis; (f) nervous system disorders e.g. Alzhemia; (e) infections caused by bacteria, viruses and fungi; and (h) ocular

C C AAM2966 to AAH99904 encode the human proteins given in AAM25225 to C AAM29966. The proteins can have activities based on the tissues and calls they are expressed in, such as: antiinfammatory; antirhenmatic; c antiarthritic; immunosuppressive; antibarcerial; endocrine; cardiant; c cardiovascular; antianemosuppressive; antibarcerial; antialematic; cardiovascular; antianemosuppressive; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidathem can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis c of disorders associated with the activity of a protein e.g. inflammation, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal confections, autoimmunity, genetic disease, heamtopoletic disorders, cancer, multiple sclarosis, depression, costeoporosis, severe combined immunodeficiency, decreme, allergic continitis, asthma, diabetes, cancer, multiple sclarosis, depression, contended and disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         napin precursor (gNa) - rape
NiAlternate names: 1.7 S seed storage protein
C;Species: Brassica napus (rape)
C;Date: 20-Jun-1989 #sequence_revision 20-Jun-1989 #text_change 16-Jul-1999
C;Accession: A29802
C;Accession: A29802
C;Accession: A29802
C;Accession: A29802
A;Title: Nucleotide sequence of a member of the napin storage protein family from Brassi
A;Reference number: A29802; MUID:87308225; PMID:3040733
A;Accession: A29802
A;Accession: A298
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Status: preliminary

A)Note: the list of introns is incomplete
C)Complex: type XI collagen may be a heterotrimer of two alpha 1(XI) chains (see PIR: 3(XI) chain (see PIR: GGHUGC), initially linked by disulfide bonds among their carbox remed with desmosine cross-links made from lysine and allysine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (fragment) #status predicted <PAR predicted <COL2>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Note: parts of this sequence were determined by protein sequencing C; Comment: Prolines and lysines at the third position of the tripeptide repeating unied and subsequently O-glycosylated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Molecular cloning of cDNA and

DISEASE: Defects in COL11A2 are the cause of autosomal recessive otospondylomegaepiphyseal dysplasia (OSMED), a skeletal dysplasia accompanied by severe hearing loss. The phenotype overlaps that of autosomal dominant skeletal disorders (Stickler and Marshall syndromes) but can be distinguished by disproportionately short limbs and lack of coular involvement.

-1. DISEASE: Defects in COL11A2 are the cause of Weissenbacher.

Zweymueller syndrome (WZS), an autosomal dominant disorder allelic with STL3 and OSMED. It is also referred to as heterozygous OSMED.
-1. DISEASE: Defects in COL11A2 are the cause of autosomal dominant nonsyndromic sensorineural deafness type 13 (DFNA13). Affected individuals experience progressive hearing loss beginning in the second to fourth decades, eventually making use of amplification

                                                                                -: SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-: TISSUE SPECIFICITY: EXPRESSED TO A HIGH DEGREE IN ALL THE REGIONS OF THE BRAIN OF ADULTS AND IN MEIOTIC CELLS OF THE TESTIS. IN ADDITION, VERY LOW LEVELS ARE DETECTED IN VARIOUS NON-NEURONAL TISSUES (HEART, MOSCLE, LIVER, LUNG AND KIDNEY).
-: DEVELOPMENTAL STAGE: IDENTIFIED AT HIGH LEVELS IN NEURONAL TISSUES OF EMBRYOS AS EARLY AS DAY 14.5. THIS EXPRESSION REMAINS CONSTANT IN ALL FURTHER DEVELOPMENT STAGES (UP TO THE ADULT). ON THE OTHER HAND THE EXPRESSION IN NON-NEURONAL TISSUES IS DOWN-REGULATED FROM STAGE 17.5 DAY OLD EMBRYOS.
Strong T.V., Tagle D.A., Valdes J.M., Elmer L.W., Boehm K., Swaroop M., Kaatz K.W., Collins F.S., Albin R.L.; "Widespread expression of the human and rat Huntington's disease gene in brain and nonneural tissues.";
                                                                                                                                                                                                          -!- POLYMORPHISM: THE POLY-GLN REGION DOES NOT APPEAR TO BE POLYMORPHIC, EXPERINING THE ABSENCE OF A RODENT HD-LIKE DISORDER.
-!- SIMILARITY: CONTAINS 10 HEAT REPEATS.
-!- SIMILARITY: BELONGS TO THE HUNGTINTIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

"Prediction of the coding sequences of unidentified human genes. XIV.
The complete sequences of 100 new cDNA clones from brain which code
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -- FUNCTION: Transcriptional repressor.
-- SUBCELLULAR LOCATION: Nuclear.
-- SUBCELLULAR LOCATION: Nuclear.
-- ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.
-- TISSUE SPECIFICITY: Highest leavels in cerebellum.
-- SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H9-TYPE ZINC-FINGER PROTEINS. HIC TRANSCRIPTION FACTORS SUBFAMILY.
-- SIMILARITY: CONTAINS 1 BTB/FOZ DOMAIN.
